

B1 & B2 Two-Strut Coil Tie

DESCRIPTION

The Dayton Superior B1 Two-Strut Coil Tie and B2 Four-Strut Coil Tie, when used as inserts for lifting and handling thin wall precast elements, are extremely effective.

FEATURES & BENEFITS

- It can be used with or without cones
- Can be combined with coil rod to form an adjustable tie
- Safe working load provides a factor of safety of approximately 2 to 1
- The coil threads are fast acting and self-cleaning.

PRODUCT DATA

- Available in 1/2", 3/4", 1", 1 1/4" and 1-1/2" diameters in plain or electro galvanized finish
- To determine the required coil tie length, subtract two times the desired or specified setback from the wall thickness
- Safe working load provides a factor of safety of approximately 2 to 1
- Coil ties are available with an optional B3 Screw-on Coil for use with the B30 Screw-on Plastic Cone to set the insert back from the face of the concrete. Minimum spacing between inserts is twice the corner distance.
